Before computers, telephones and the internet, when one country wanted to know what another was doing, their operatives would go there to collect information. Since technology, intelligence agencies collect information differently; however they still use the same scientific approach. This has resulted in a renewed emphasis on the human component of intelligence collection and analysis. This lecture will explore the latest approaches in collecting and analysing information for intelligence.

Mr Steve Longford is a former detective, senior intelligence analyst and behavioural analyst for the Queensland Police. He also worked as head of the Violent Crime Analysis unit with the Queensland Police. He has extensive experience in providing intelligence solutions to law enforcement, intelligence and compliance agencies in Australia, New Zealand and the UK by combining different facets of profiling, psychology, deception detection, body language, Neuro-Linguistic Programming and interview methodologies into a single tool called Behavioural Intelligence. Mr Longford is now the Managing Director of New Intelligence, a Canberra based company that specialises in developing and providing training programs for interviewing, intelligence analysis, decision making and the unique Human Skills program.

An Australian Institute of Professional Intelligence Officers networking function will follow the lecture. To register, please contact Greg McAnulty on T: 0429 291 555 or E: President@aipio.asn.au For further information about AIPIO please visit www.aipio.asn.au

This event was made possible by a grant from the National Science Week.
